Auto-Scroll · v2.1.0

A simple, step-by-step guide

> Read posts from the open X feed and generate relevant replies. This is not a profile list or a pasted-link queue.

Before you press Start

1. Sign in to Fix with your Access Key and its X username. Open X in the same browser and sign in to that same account.
2. Open the extension popup. Choose one of the four Modes. Only one mode should run at a time; do not install two active automation copies.
3. Open the mode panel using the round Fix logo. Press Profile Reload in its header. Check your own name and @username—not the profile you are visiting.
4. Premium means the Fix Access Key is active. It is not proof of an X paid subscription. Keep open keeps the panel visible; drag the logo/header and use the corner handles to resize.
5. For comments, select Use credit balance or Use API key in the extension popup, then Save Settings. One confirmed credit reply uses one balance. Your API provider may charge separately; there is no automatic credit fallback.
6. On a fresh install: Auto-Scroll gaps are 4, 5, 6, 7 seconds and Skip reposted posts is ON. Saved choices on an existing installation are preserved. Profile Engage delays are always at least 5 seconds, including old saved values.
7. Every Start/Run checks known expiry locally. When the last successful verification is 72 hours old, one shared server request is required. There is no six-hour/popup polling. A failed due check blocks a new run and retries no sooner than five minutes. Known expiry blocks immediately. Credits still require server authentication.

Do this in order

1. Choose Auto-Scroll in the popup and open the X feed you want to use.
2. Press Profile Reload. Set the four Comment gap values and a Run time.
3. Choose the Like and repost-related switches carefully. Commenting remains the main action.
4. Press Start Auto-Scroll. Watch Live Status: comments, likes, next wait and running time.
5. Press Stop to finish. If a real X comment/account restriction appears, stop and respect it.

Find the right control

Control on the panel	What to do
Comment gap (sec) – 4 values	Enter seconds in the four boxes, for example 6, 7, 8, 9. A value is selected between actions. Loading, AI and verification add time. On a fresh install: Auto-Scroll gaps are 4, 5, 6, 7 seconds and Skip reposted posts is ON. Saved choices on an existing installation are preserved. Profile Engage delays are always at least 5 seconds, including old saved values.
Run time (min)	Use a positive number to stop after that many minutes. 0 means no configured runtime stop—not unlimited X permission.
Like posts	Optional likes. If a contextual Like limit or two verified rollbacks occur, this switch turns OFF; comments can continue unless X restricts comments/account.
Don’t repost / Skip reposted posts	Don’t repost prevents your own repost action. Skip reposted posts skips reposted content. These are different controls.
Keep open / Profile Reload	Keep the panel visible, or refresh detection of your own signed-in account. Stop before changing identity/settings.
Live Status / Stop	Watch results and runtime. Stop ends the active run; it does not undo an already submitted reply.

Limits, waits and safe restarting

> You do not set a Follow cooldown in this mode. Optional Like failure switches Like OFF rather than pausing the whole comment run. Re-enable Like only when appropriate. A global or explicit comment/post restriction still stops work. No new artificial daily Comment quota was added.

Stop does not undo an action already sent to X. On restart, existing Follow/Like states are checked before another click. A possibly sent reply is not blindly repeated: the duplicate-submit guard remains. No “Reviewed · skip” confirmation is required; a genuinely unconfirmed reply can still stay pending with an explanatory status.

Memory and saved progress

Auto-Scroll is not the Link or Like queue. Their separate 48-hour Memory controls are not this feed’s controls. Avoid repeated posts and keep existing submission guards. Today used rolls over at 05:00 Bangladesh time when checked; All time used is the Access Key server total.

A small first run

Try a small owner-controlled run before a large queue. Check the actual result on X and the panel counts. These are local browser tools, not a promise of follower growth, unlimited comments, or protection from account restrictions. Do not automate unwanted or repetitive replies.

> Select language is the initial placeholder. Select English, বাংলা or हिन्दी before Open PDF / guide; without a selection no PDF opens.
