Profile Engage · v2.1.0

A simple, step-by-step guide

> A three-stage profile follow-up workflow. List 1 finds and engages new profiles. List 2 checks for follow backs for seven days. List 3 holds expired profiles.

Before you press Start

1. Sign in to Fix with your Access Key and its X username. Open X in the same browser and sign in to that same account.
2. Open the extension popup. Choose one of the four Modes. Only one mode should run at a time; do not install two active automation copies.
3. Open the mode panel using the round Fix logo. Press Profile Reload in its header. Check your own name and @username—not the profile you are visiting.
4. Premium means the Fix Access Key is active. It is not proof of an X paid subscription. Keep open keeps the panel visible; drag the logo/header and use the corner handles to resize.
5. For comments, select Use credit balance or Use API key in the extension popup, then Save Settings. One confirmed credit reply uses one balance. Your API provider may charge separately; there is no automatic credit fallback.
6. On a fresh install: Auto-Scroll gaps are 4, 5, 6, 7 seconds and Skip reposted posts is ON. Saved choices on an existing installation are preserved. Profile Engage delays are always at least 5 seconds, including old saved values.
7. Every Start/Run checks known expiry locally. When the last successful verification is 72 hours old, one shared server request is required. There is no six-hour/popup polling. A failed due check blocks a new run and retries no sooner than five minutes. Known expiry blocks immediately. Credits still require server authentication.

Do this in order

1. Paste profile links or @usernames in 1 · New profiles. Extra text, query strings and trailing paths are cleaned by Find Links.
2. Press Find Links, inspect View Links, then Run. Duplicate, own, permanent Memory and List 2/3 profiles are filtered.
3. For a non-follower, check Follow/Following. Follow if needed, inspect the first 2–3 loaded posts, and reply to the newest eligible unliked original, regardless of age. Confirmed reply moves it to List 2.
4. If the profile follows you, follow back when needed, then move it to Permanent Memory. Do not treat an unknown relationship as proof.
5. Run 2 · Waiting for follow back to revisit the saved profiles. It continues from the next unfinished profile and loops after a full pass. Stop or Stop after controls when to finish.

Find the right control

Control on the panel	What to do
1 · New profiles	Editable input → Find Links → Run. View Links shows the current filtered queue. Stop partway and the unfinished profile remains pending.
2 · Waiting for follow back	Read-only links. Each visit shows elapsed time and time left. Manually unfollowed by mistake? If not expired, it follows again before engagement without resetting the clock.
Seven-day clock	Starts at entry to List 2, not on every Run. Followers move to Memory. After 7 × 24 hours without follow back, verify Unfollow then move to List 3.
3 · Expired after 7 days	No automatic Run. View Links, Copy all, or Remove selected. Paste matching profile links and press Enter (Shift+Enter adds a line), or Remove now. Numbering refreshes.
Delay Between / Stop after	Four waits in seconds. Stop after switch + number ends after that many processed profiles. It saves the next unfinished profile; it is not a timed break.
Pause After / Like / Repost	Pause After: process N profiles, wait M minutes, then continue. Comment is required; Like and Repost are optional. Reposted posts are never comment targets.
Delay ≥ 5 seconds	On a fresh install: Auto-Scroll gaps are 4, 5, 6, 7 seconds and Skip reposted posts is ON. Saved choices on an existing installation are preserved. Profile Engage delays are always at least 5 seconds, including old saved values.

Limits, waits and safe restarting

> Follow/Like/Unfollow rate warning immediately starts an 11-minute pause. Without a warning, Follow/Like can retry once only after verified OFF; two rollbacks pause. Stop remains visible during countdown. After the wait, the original pending profile is rechecked automatically in the original tab; warning again means another wait. Stop cancels the automatic wait and preserves the pending profile. Do not close X if you expect automatic continuation; a suspended/closed browser cannot run a timer.

Stop does not undo an action already sent to X. On restart, existing Follow/Like states are checked before another click. A possibly sent reply is not blindly repeated: the duplicate-submit guard remains. No “Reviewed · skip” confirmation is required; a genuinely unconfirmed reply can still stay pending with an explanatory status.

Memory and saved progress

Permanent Profile Memory has no automatic expiry; view, add or remove entries there. It is separate from Link/Like Memory. Private, sensitive or otherwise unavailable profiles are removed from the working list without a Failed archive/export. No warning is bypassed. Rate-limited profiles remain pending, not deleted. Three consecutive empty timelines still stop the run to avoid repeatedly acting on broken pages.

A small first run

Try a small owner-controlled run before a large queue. Check the actual result on X and the panel counts. These are local browser tools, not a promise of follower growth, unlimited comments, or protection from account restrictions. Do not automate unwanted or repetitive replies.

> Select language is the initial placeholder. Select English, বাংলা or हिन्दी before Open PDF / guide; without a selection no PDF opens.
